

# Changes in Lead Service Line Reporting by Illinois Water Utilities (2018-2019)

Tara Jagadeesh, Justin Williams

9/9/2020

## Summary

This report compares data from the Public Water Supply Service Line Material Inventory by the Illinois EPA from 2018 to 2019. During this analysis, we identified several water utilities which reported a suspicious decrease in UnknownMaterial service lines and a simultaneous increase in UnknownNotLead service lines. Outlined below are these trends and a table of the flagged utilities. These results suggest that, for the purposes of outreach and policy-making, the 2018 dataset may be more reliable until we have a better understanding of the inventory procedure for each flagged utility.

## Trends

### Service Line Changes

Overall, some categories of service lines have remained largely the same from 2018 to 2019 while others have changed (Table 1). On average, the total number of service lines reported has not significantly changed. Neither have the categories of Lead, CopperLeadSolder, CopperNonLeadSolder, CastDuctileIronTransite, and Galvanized. For two types of service lines, however, the number reported has increased: UnknownNotLead and Plastic. Finally, there has been a decrease in the reported number of UnknownMaterial lines. Given that the total number of service lines has, on average, remained constant, these results suggest that utilities may be reclassifying the UnknownMaterial lines for the 2019 reporting year.

**Table 1: Service Line Changes (2018 - 2019)**

The average number of lines reported for each service line category was compared from 2018 to 2019 using two-tailed paired t-tests ( $\alpha = 0.05$ ). There was a significant change in UnknownNotLead and Plastic lines, with number of lines reported as higher in 2019 than 2018. There was also a significant change in UnknownMaterial lines, with numbers of lines reported as lower in 2019 than 2018.

Service Line	2018 (n = 1751)		2019 (n = 1752)		t	p
	Mean	SD	Mean	SD		
Total	2194	13375	2196	13372	-0.18	0.86
Lead	392	9443	387	9372	1.48	0.14
CopperLeadSolder	182	1001	217	1259	-1.59	0.11
CopperNonLeadSolder	746	2564	748	2482	-0.13	0.89
CastDuctileIronTransite	17	217	20	246	-1.17	0.24
Galvanized	34	191	34	177	0.04	0.97
Plastic	134	427	147	479	-2.66	0.01
UnknownMaterial	610	3931	455	3308	3.37	0.00
UnknownNotLead	81	1037	188	2101	-2.47	0.01

## Flagged Utilities

To understand this potential reclassification and its implications for lead service line data, we compared the decrease in UnknownMaterial lines to the increase in UnknownNotLead lines and found the following:

- Of the 1742 water utilities catalogued by IEPA across both years, 142 (8.2%) reported a decrease in UnknownMaterial lines and an increase in UnknownNotLead lines.
- Across the 142 flagged utilities, the median percent of reclassification from UnknownMaterial lines to UnknownNotLead lines was 100%.
- 58 of those utilities (3.3% of the total) reported exactly the same decrease in number of UnknownMaterial lines and increase in number of UnknownNotLead lines. This suggests that some utilities may be reclassifying all of their UnknownMaterial lines as UnknownNotLead.
- 24 of the flagged utilities classified all of their service lines as UnknownNotLead in 2019. In 2018, however, none of the flagged utilities had classified all of their lines as UnknownNotLead. Given this suspicious shift, the potential consequences of lead service lines in the communities served by these utilities may be very high if policy is to be informed by 2019 data.
- The flagged utilities spanned 63 out of the 102 counties of Illinois (61.8%). Using the 2019 data may thus have widespread impacts for communities across the entire state.

**Table 2: Flagged Water Utilities**

142 of 1742 utilities were flagged for reporting decreases in UnknownMaterial lines and increases in UnknownNotLead lines between 2018 and 2019. The flagged utilities are outlined below with the percent of UnknownMaterial lines that were reclassified to UnknownNotLead the following year. (\* Utilities for which reclassification was over 100% due to either an increase in total lines or an additional reclassification from other categories.)

County	Utility Name	Total Service Lines (2018)	Total Service Lines (2019)	Percent of Lines Designated Unknown-NotLead (2018)	Percent of Lines Designated Unknown-NotLead (2019)	Percent of Lines Reclassified from Unknown-Material to Unknown-NotLead
